

Note..
When uploading a file, upload
only the encrypted part

Note..
the package should just be
your userID, encryptedDoc and storageKey.
This should be after you have encrypted it
so you have done the necessaying RSA/AES
Locally

Note..
user side

Note..
db side

«Michael»
I combined this with the uploading of the encryption key
Please if you feel they should be separated keep them
Separated. You will know what is better to do,
I just assume that it is possible to send both at once.
